

Resident Positions in Neuroradiology

Department of Neuroradiology, University Hospital Zurich

Throughout the year we are opening resident positions in Neuroradiology as a part of the specialization in Radiology. Candidates with previous training in Neurology, Neurosurgery or other clinical Neuro-disciplines are very welcome to apply. Qualified candidates may be selected for the Neuroradiology – Radiology career rotation program at the University Hospital Zurich, which offers an excellent clinical training in combination with the full range of academic opportunities. In addition our department offers academic mentoring for candidates with a strong research profile. Depending on your career plans the rotation can be tailored individually to achieve the board certification in “Diagnostic Neuroradiology” very efficiently. Up to one year of residency training in Neuroradiology can be accepted. This implies, that those candidates need only one additional year (instead of two) to achieve the title (see also fellowship position in Diagnostic Neuroradiology). Candidates, who want to specialize in Interventional Neuroradiology (INR) thereafter may qualify for one of our INR-fellowship positions.

The Department for Neuroradiology at the University Hospital Zurich is an internationally renowned academic institution that covers the full spectrum of diagnostic and interventional procedures employing the latest technologies. Our service is provided in close cooperation with all clinical Neuro-disciplines including dedicated intensive-care and stroke units and offers very unique research opportunities.

We offer an intensively supervised training program with expert mentoring and adequate working time compensation. The successful candidate will fully participate in the neuro-radiological service including a broad spectrum of advanced neuroimaging techniques, on-call service, interdisciplinary boards and conferences. Research and teaching activities are optional for residents.

We are seeking for highly motivated and strongly team oriented young colleagues, who want to dedicate a high-level training to Neuroradiology.

Please feel free to contact Professor Stippich for further details. You may send your application to:

Professor Dr. med. Christoph Stippich
